

Assignment: Objects in Memory

Welcome to this Mini Project.

For this assignment, you will analyze how objects are stored in memory and how this is related to the **id** of an object and to the **is** operator.

♦ Your task is to:

- Explain how objects are stored in memory. Mention the role of the id of an object.
- Explain the purpose of the **is** operator. How is it related to the id of an object?

♦ Solution:

You can find a sample solution in the "Instructor example" tab.
