Assignment: Types of Import Statements

Welcome to this Mini Project.

Now you will analyze the importance and types of import statements in Python and why they are helpful to write more organized and maintainable programs.

Your task is to:

- Explain the types import statements that you can use to import a module in Python.
- For each one of them, explain how you can use or call the imported elements. Please include examples.

Solution:

You can find a sample solution in the "Instructor example" tab.
